Quick Start Guide

Setting up your Water Heater Controller & App

- 1 Download the app**
- Search for “Armada Power”
 - Install on your mobile device

WiFi password required

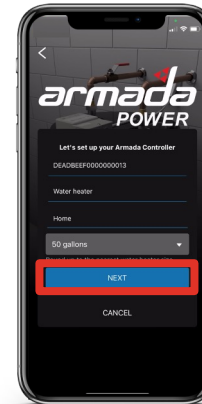

- 2 Tap “SIGN UP”**

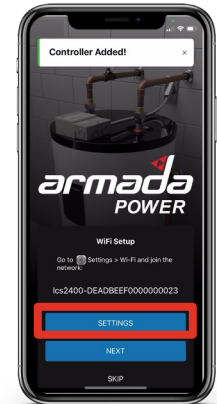

- 3 Scan the barcode** on your water heater controller to connect it to the app.

- 4 Fill in info & tap “NEXT”**

- 5 click “SETTINGS”**

For the next section
follow the steps based on your device.

APPLE
pg 4

ANDROID
pg 5

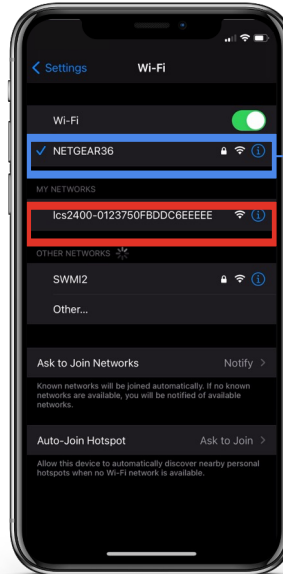

Quick Start Guide

Setting up your Water Heater Controller on  Apple

- 1 On the settings screen tap the “Wi-Fi” link

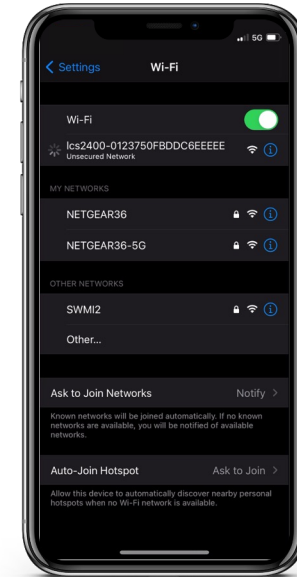

- 2 Tap the new network that starts with either **lcs2400** or **lcs2100**

Keep this network in mind as this is the network you will rejoin in step 2 on pg 6. This must be your home wifi network

- 3 This network will now appear next to the WiFi On/Off switch

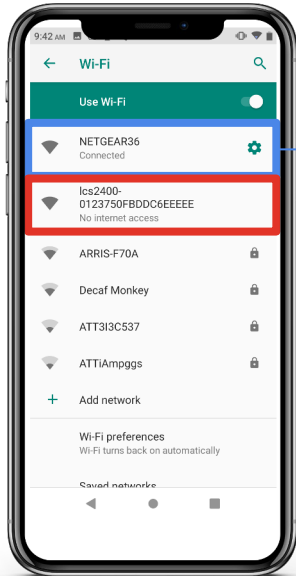

When finished, **GO BACK TO THE ARMADA POWER APP**

Quick Start Guide

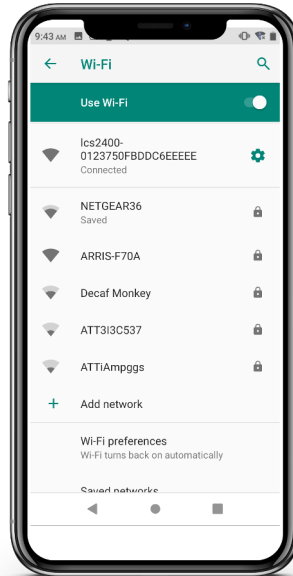

Setting up your Water Heater Controller on  Android

1 Tap the new network that starts with either lcs2400 or lcs2100

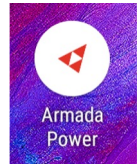

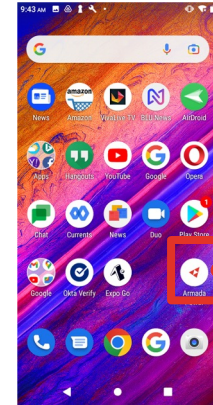

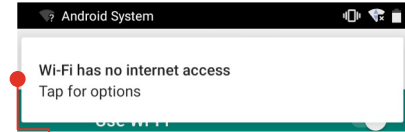

Keep this network in mind as this is the network you will rejoin in step 2 on pg 6. This must be your home wifi network

2 This network will now appear next to the WiFi On/Off switch
Make sure it is **“Connected”**

3 **IGNORE THIS POP UP**
go to your home screen
tap on the Armada Power App

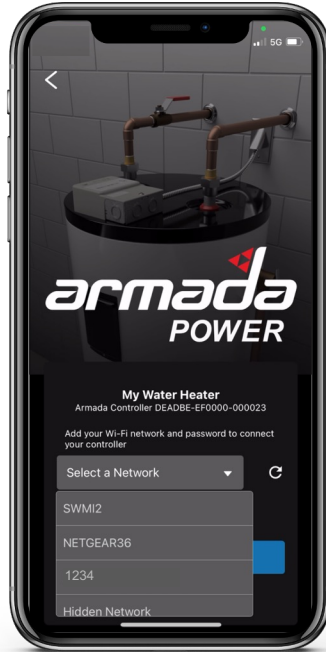

Quick Start Guide

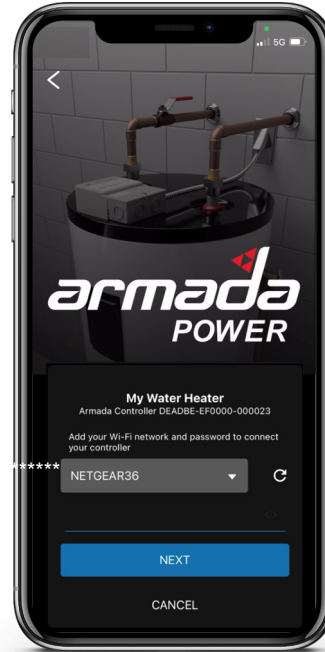

Setting up your Water Heater Controller & App

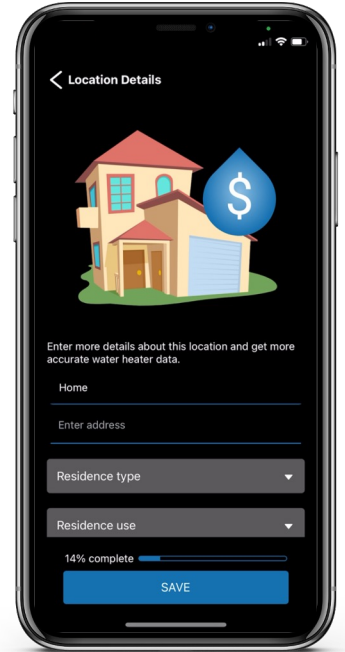

1 Tap "NEXT"

2 Select your WiFi Network

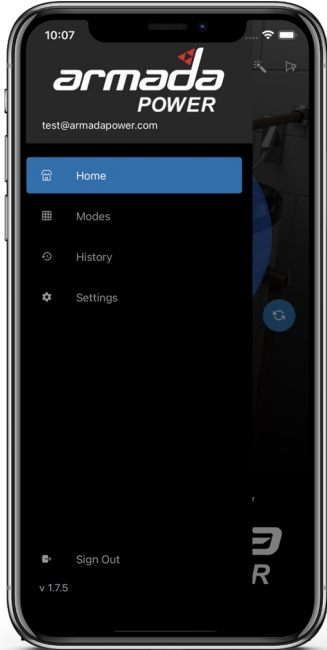

3 Enter your Wifi Password

4 Enter your location details and hit next and you are connected to your Armada Power Controller

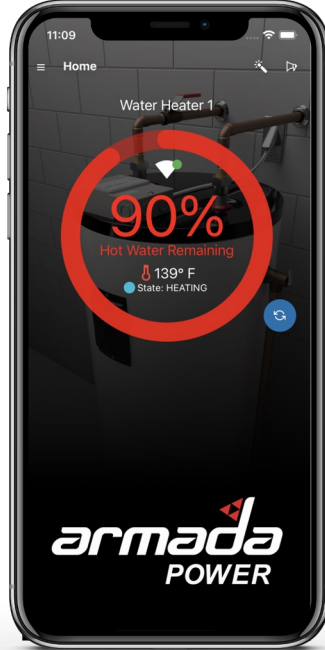

Quick Start Guide

NAVIGATION

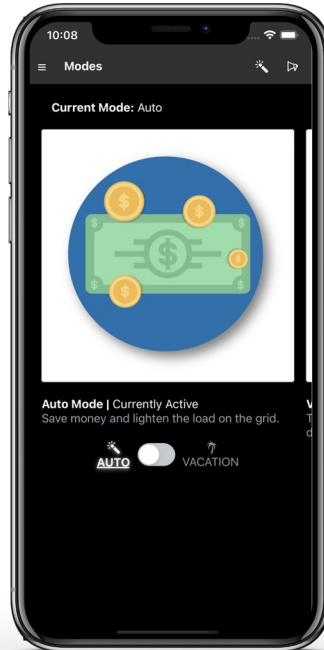

Menu

Tap the menu button in the upper right hand corner

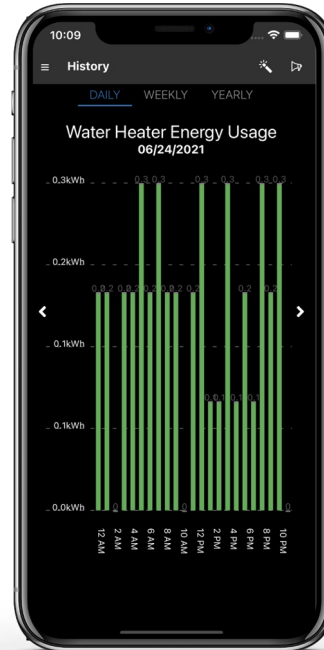

Home

View the status of your water heater

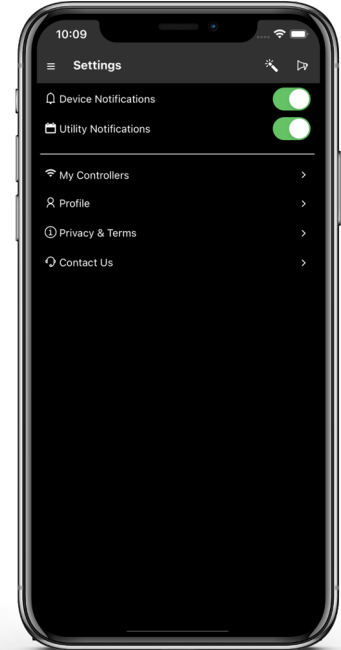

Modes

Switch between auto and vacation modes

History

View your hot water usage history

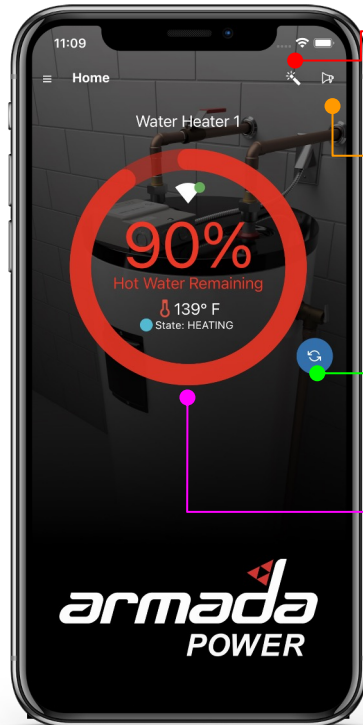

Settings

View and update your settings

Quick Start Guide

HOME

Modes

- Shows the current mode set on the modes page
- Tap the icon to navigate to the modes page
- The modes page can also be accessed through the menu

Notifications

- Tap the icon to navigate to the notifications page
- A red indicator will appear on the upper right of the icon to indicate new notifications

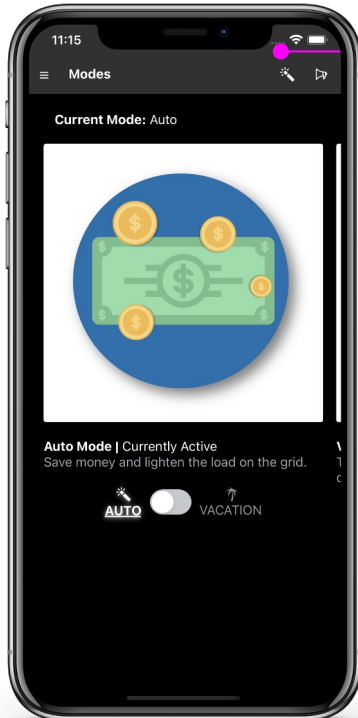

Update

- Your water heater's status refreshes every minute automatically
- If you'd like to see your water heater's status immediately, tap the refresh button on the bottom right

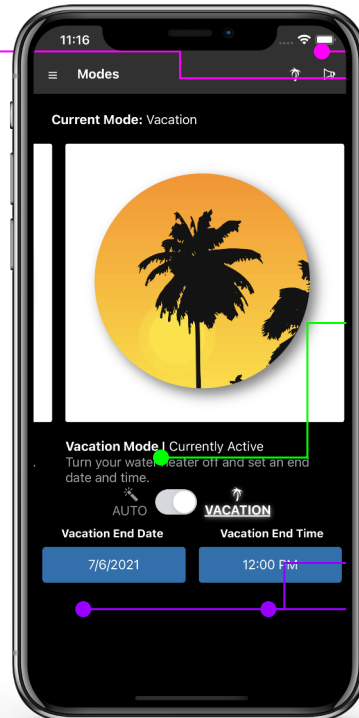

States

Unknown - no connector or state not set
Malfunction - the controller is in a state that indicates failure or in maintenance mode
Heating - the controller is in the "load on" state
Vacation Mode - set to vacation mode
Scheduled Curtailment - curtailment event in progress (not opted out)
Ready - SoC full cutout or SoC above 0% (software)
Grid Support - device off (likely due to FR command or featherback)

Auto Mode

Vacation Mode

- When you change modes, the Modes icon in the header changes
- You can tap the Modes icon in the header to go straight to the Modes page
- Switch to Auto mode or Vacation mode
- Auto mode saves you money and lightens the load on the electrical grid
- Vacation mode turns your water heater off
- You can choose your own end date and time for vacation mode
- By default, it's set to expire in 7 days at midnight

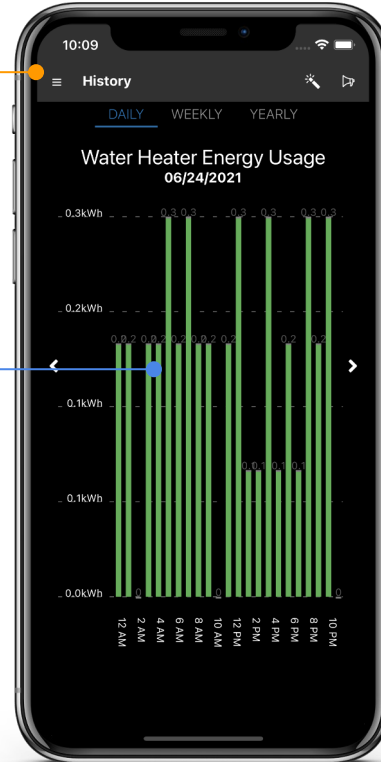

Quick Start Guide

HISTORY

Access your device usage history in daily, weekly, and yearly views

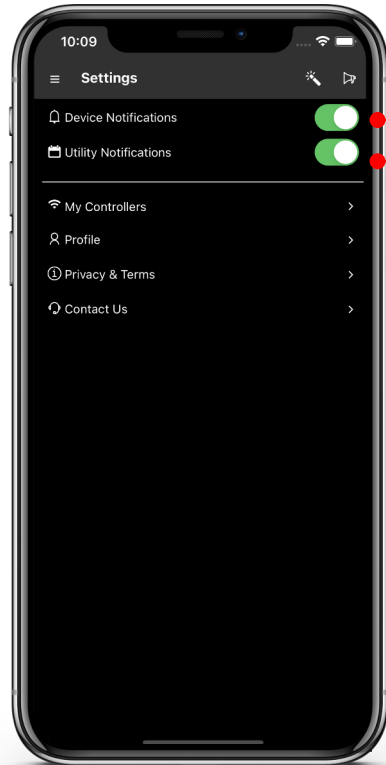

View current and previous history

Quick Start Guide
